Directorate:	IT and Innovation
Date written:	October 2024
Notice Period:	2 Months
Grade:	GG5-10
Job code:	1733

Purpose of job

Responsible for using data, technology and insight to provide forecasting that creates a predictable business and is influential in operational and strategic decisions making.

Build and manage trusted relationships with stakeholders and solution providers to provide forecasting data to timelines and in formats relevant to the audience.

Stay up to date on innovation within insight and data by understanding the impact on the organisation of emerging trends in data tools, analysis techniques and data usage.

Be passionate about turning data into information, information into insight and insight into action to ensure the central shaping of processes, services and strategies.

Key duties and responsibilities

- Provide forecasting data and analysis to create a predictable business through the use of data, technology and insight.
- Identify, analyse, capture and validate business and user requirements for forecasting solutions.
- Deliver and record the return on investment that forecasting performance and insight brings.
- Identify projects where appropriate forecasting models can inform operational and strategic decision making to improve business functions and the customer experience.
- Build and develop successful, influential relationships with stakeholders across the business and promote a culture where forecasting tools, predictable insight, data and analytics is leveraged at all levels.

- Collaborate with the Data Team to employ the technologies needed to enable forecasting insight to be embedded and automated. Support in the successful role out of these to the business.
- Consider how research for new projects such as IoT, smart-homes, machine learning and AI can be used in forecasting. Stay up to date on emerging trends and identify how these can be applied.
- Work with the wider Insight Team to lead on the regular review of predictive models to ensure these reflect the ambitions of the business, and deliver evidence-based, actionable outcomes.
- Build a network of forecasting contacts both within and outside of the sector to share knowledge and identify best practice that could be applied. Collaborate with the business to implement these as appropriate.
- Undertake any other duties commensurate to the role.

Knowledge, skills and experience required

- Previous experience working within a performance management or forecasting role.
- Demonstrable experience of applying a range of different analytical skills, providing insight from large data sets and delivering measurable change as a result.
- Ability to understand, analyse and investigate the interdependencies of operational delivery in addition to external factors, and the impact on expected performance.
- Strong experience in building trusted relationships and engaging with stakeholders at all levels of the business.
- Experience of identify business requirements and effectively briefing these to solution providers, and partnering with the business to deliver successful outcomes.
- Excellent communication skills, with the ability to present and challenge others based on evidence and best practise.
- Acute attention to detail, with a methodical and organised approach to work and a proven ability to write insight reports and tailor these to the audience.
- A motivated and enthusiastic individual, who can work under pressure and prioritise workloads to deliver an outstanding customer service.
- Passionate about making data accessible, trusted and at the heart of decision making.
- A flexible team player personality, with a natural ability to work in a rapidly changing environment and multi-task.

- Full driving licence and access to own transport, or ability to travel in a timely and efficient manner to attend meetings in locations not easily accessed by public transport.
- Demonstrate our values and behaviours.
